

SoftLab

BUSINESS SOFTWARE SOLUTIONS

Introducing SoftLab Business Software Solutions

The solution to your complex business outsourcing requirements.

SoftLab BSS is an offshore business technology solutions company based in Peru. We specialise in Application Development and Infrastructure Management. We are your strategic partner bringing you a range of managed and bespoke services to ensure your projects success. Our dedication to quality and customer support will ensure continued long term business relationships with our all of our clients.

Application Development

Success in the IT industry highly depends on the correct use of technology while using innovative ideas and strategic techniques. We can provide customization and development of software to expand your business potential and effectiveness. Our competent team possesses expertise in development technologies over a wide range of custom programming platforms including LAMP (Linux, Apache, MySQL and PHP), .NET technologies such as The Microsoft .NET Framework, C# and VB.net among many others.

Infrastructure Management

To maintain high levels of availability without expensive ongoing investments in performance management technology, more companies are beginning to outsource IT infrastructure management to specialist companies. Routine operations management of IT infrastructure frequently bogs down key personnel who spend more time "fire-fighting" than they do on supporting more strategic initiatives, impacting the organization's ability to rapidly adopt new technologies. By outsourcing Infrastructure Management, resources can be redeployed to critical projects that enhance business productivity and profitability.
